With a full product lineup, **we have the answer** that can meet your needs for compact drive systems with high torque and high accuracy.

For your ideal machine, you need a compact servo drive with high torque and high accuracy. Your dream can come true with Yaskawa's gearless, direct-drive Σ series.

Use a direct drive to supply high torque at low speeds, obtain precise positioning at high speeds without any slippage and backlash, and simplify your machine's configuration and maintenance. With a wide variety of products in our lineup, you have an expanded range of applications to choose from.

Use Yaskawa's Σ series of gearless direct drives to make your ideal machine a reality.

Powerful & Simple

Advantage
1

More powerful with higher positioning accuracy

! High torque and High speed —

- A high-torque operation is realized at low speeds without gears.
Instantaneous peak torque : 6 N·m to 600 N·m
- A high-speed operation reduces cycle time.
Maximum motor speed : 250 min⁻¹ to 500 min⁻¹

! High precision —

- High-precision indexing of 1,000,000 pulses per rotation (P/R) is available.
High-resolution encoder(20-bit): 1,048,576 P/R
- No backlash means that high-precision operation with shorter settling time is possible with high frequency use.
- A current control algorithm with conversions for the d-q axis realizes higher accuracy in torque control.

Advantage
2

Simplified machine configuration, adjustment, and maintenance

! Compact —

- The size of the machine's drive section is reduced because of the slim motor design.
- The hollow space in the motor can be used for wiring and piping.

! Easy —

- Smooth and noiseless drive.
- Use of a serial encoder reduces the amount of wiring.
- The gearless drive requires no maintenance for lubrication or any inspections for wear and tear.
- Parameters are used to change the type of control being used: speed control, torque control, or position control.

Comparison of drive systems for rotary tables

Typical servo drive system

<Current limitations>

- Reduced accuracy in positioning with excessive slippage and backlash
- Noise
- Maintenance for wear and tear or for lubrication

■ Motor with Gear

■ Motor + Timing Belt

■ Hollow Motor + Hollow Gear

Direct drive system

<Technical improvements>

A drive system without reducers, such as gears and pulleys, eliminates practical difficulties and helps make the machine smaller. Some advantages are:

- Improved positioning accuracy with direct connection to a load
- Low noise
- Clean room use (No gear means no lubrication.)
- Reduced number of parts
- Easy wiring and piping based on the motor's hollow design

Applications

- Semiconductor-manufacturing machines
- Machines for the manufacturing of liquid-crystal circuit boards
- Units for inspection and testing
- Electronic parts assembling machines
- IC handlers
- Inspection units for integrated circuits
- Automated machines
- Manipulator

Basic Specifications	Input Power Supply	SERVOPACK Capacity Range	Single-phase 100 VAC/Single-phase 200 VAC		Single-phase 200 VAC	Three-phase 200 VAC				
		Main Circuit	Three-phase (or Single-phase)	200 to 230 VAC +10 to -15%, 50/60 Hz						
			Single-phase	100 to 115 VAC +10 to -15%, 50/60 Hz						
	Control Circuit	Single-phase	200 to 230 VAC +10 to -15%, 50/60 Hz							
		Single-phase	100 to 115 VAC +10 to -15%, 50/60 Hz							
	Control Method	Single-phase or three-phase full-wave rectification (single-phase voltage doubler rectifier at 100V), IGBT, PWM control, sine-wave power drive system								
	Feedback	17-bit serial encoder (incremental/absolute), 20-bit serial encoder (incremental/absolute)								
	Operating Conditions	Ambient/Storage Temperature	0 to +55°C / -20 to +85°C							
		Ambient/Storage Humidity	90% RH or less (with no condensation)							
		Vibration/Shock Resistance	4.9 m/s ² / 19.6 m/s ²							
Configuration	Base mounted (Rack mounted available as an option.)									
Performance	Speed Control Range	1: 5000 (The lowest speed of the speed control range is the speed at which the servomotor will not stop with a rated torque load.)								
	Speed Regulation	Load Regulation	0% to 100% load: ±0.01% max. (at rated speed)							
		Voltage Regulation	Rated voltage ±10%: ±0.01% max. (at rated speed)							
		Temperature Regulation	25±25°C: ±0.1% max. (at rated speed)							
	Frequency Characteristics	600 Hz (at J _L = J _M)								
	Torque Control Tolerance (Repeatability)	±1%								
Soft Start Time Setting	0 to 10 s (Can be set individually for acceleration and deceleration.)									
Torque Control Mode	Input Signals	Reference Voltage	±3 VDC (Variable setting range: ±1 to ±10 VDC) at rated torque (positive torque reference with positive reference), input voltage: ±12 V max.							
		Input Impedance	Approx. 14kΩ or more							
		Circuit Time Constant	30 μs							
Speed Control Mode	Performance	Soft Start Time Setting	0 to 10 s (Can be set individually for acceleration and deceleration.)							
	Input Signals	Reference Voltage	±6 VDC (Variable setting range: ±2 to ±10 VDC) at rated speed (servomotor forward rotation with positive reference), input voltage: ±12 V max.							
		Input Impedance	Approx. 14kΩ or more							
		Circuit Time Constant	30 μs							
	Contact Speed Reference	Rotation Direction Selection	With P control signal							
Speed Selection	With forward/reverse current limit signal (speed 1 to 3 selection). Servomotor stops or another control method is used when both are OFF.									
Position Control Mode	Performance	Bias Setting	0 to 450 min ⁻¹ (setting resolution: 1 min ⁻¹)							
		Feed-forward Compensation	0% to 100% (setting resolution: 1%)							
		Positioning Completion Width Setting	0 to 1073741824 reference units (setting resolution: 1 reference unit)							
	Input Signals	Reference	Type	Select one signal from: Sign-pulse train, CCW+CW pulse train, and 90° phase difference 2-phase pulse (phase A + phase B).						
		Pulse	Form	Non-insulated line driver (+5V level)						
Frequency			1 Mpps max. (non-insulated line driver)							
Control Signal	CLEAR (Input pulse form is identical to photocoupler.)									
I/O Signals	Position Output	Form	Phase A, phase B, phase C: Line driver output							
		Frequency Dividing Ratio	Arbitrary dividing (16 to 262144)							
	Sequence Input Signal	Signal allocation can be modified.	Servo ON, P control (or Control Mode switching, forward/reverse motor rotation by internal speed setting, zero clamping, reference pulse inhibit), forward/reverse run prohibited (P-OT/N-OT), alarm reset, forward/reverse current limit (or internal speed selection), and gain switching							
	Sequence Output Signal	Fixed Output	Servo alarm, alarm code (3-bit output)							
Signal allocation can be modified.	Select three signals from: Positioning completed (speed coincidence), rotation detection, servo ready, current limit, speed warning, or NEAR signal.									
Built-in Functions	Analog Monitor (CN5)		Analog monitor connector built-in for monitoring speed, torque, and other reference signals. Speed : 1 V/1000 min ⁻¹ Torque : 1 V/rated torque 100% Lag pulse: 0.05 V/reference unit *Can be changed to other monitors by parameter setting.							
	Indicators (LED Display)		CHARGE, five 7-segment LEDs (built-in digital operator functions)							
	Communications	Interface	Digital operator (hand-held type)							
		Functions	Status display, parameter settings, monitor display, alarm traceback display, JOG operation, etc.							
	Dynamic Brake (DB)		Operated at main power OFF, servo alarm, servo OFF, or overtravel.							
	Regenerative Processing		External regenerative resistor				Built-in regenerative resistor			
	Overtravel Prevention (OT)		DB stop, deceleration to a stop, or coasting to a stop at P-OT or N-OT							
	Electronic Gear		0.001 ≤ B/A ≤ 1000							
	Protective Functions		Overcurrent, overvoltage, undervoltage, overload, regeneration error, main circuit sensor error, heat sink overheat, power phase loss, overflow, overspeed, encoder error, overrun protection, CPU error, parameter error, etc.							
	Others		Reverse rotation connection, origin search, automatic motor discrimination function							

Note:  in the SERVOPACK model should be F or A.
 F=Input power supply is 100 VAC. Input power supply for applicable motor is 200 VAC.
 A=Input power supply is 200 VAC.

		Input Impedance	Approx. 14kΩ							
Circuit Time Constant	Approx. 47μs									
Position Control Mode	Performance	Bias Setting	0 to 450 min ⁻¹ (setting resolution: 1 min ⁻¹)							
		Feed-forward Compensation	0% to 100% (setting resolution: 1%)							
		Positioning Completion Width Setting	0 to 450 reference units (setting resolution: 1 reference unit)							
	Input Signals	Reference Pulse	Type	Select one signal from: Sign+pulse train, CCW+CW pulse train, and 90° phase difference 2-phase pulse (phase A + phase B).						
			Form	Line driver (+5 V level), open collector (+5 V or +12 V level)						
Frequency	0 to 250 kpps, 200 kpps max. when an open collector is used.									
Control Signal	CLEAR (Input pulse form is identical to reference pulse.)									
I/O Signals	Position Output	Phase A, phase B, phase C, or phase S (phase S used only with an absolute encoder): Line driver output								
	Sequence Input Signal	Servo ON, P control (or Control Mode switching, zero clamping, or reference pulse inhibit), forward/reverse run prohibited (P-OT/N-OT), alarm reset, forward/reverse current limit (or internal speed selection)								
	Sequence Output Signal	Servo alarm, alarm code (3-bit output): Output terminal for CN1 is fixed. Select three signals from: Servo ready, positioning completed (speed coincidence), rotation detection, current limit, speed limit, brake release, warning, or NEAR signal.								
Built-in Functions	Communications	Interface	Digital operator (hand-held type) RS-422A port such as for PCs (RS-232C port under certain conditions)							
		1: N Communications	Up to N=14 for RS-422A port							
		Axis Address Setting	Set with parameters.							
		Functions	Status display, parameter settings, monitor display, alarm traceback display, JOG and autotuning operations, speed, torque reference signal and other drawing functions							
	Autotuning	Position/speed loop gain and integral time constant can be automatically set.								
	Dynamic Brake (DB)	Operated at main power OFF, servo alarm, servo OFF, or overtravel.								
	Regenerative Processing	External regenerative resistor (option): 30 to 400 W; Built-in regenerative resistor: 750 W								
	Overtravel Prevention (OT)	DB stop, deceleration to a stop, or coasting to a stop at P-OT or N-OT								
	Encoder Divider	The number of pulses that can be set is limited.								
	Electronic Gear	0.01 < A/B < 100								
	Internal Speed Setting	Three speeds may be internally set.								
	Protective Functions	Overcurrent, overvoltage, undervoltage, overload, regeneration error, main circuit sensor error, heat sink overheat, power phase loss, overflow, overspeed, encoder error, overrun protection, CPU error, parameter error, etc.								
Analog Monitor	Analog monitor connector built-in for monitoring speed, torque, and other reference signals.									
Indicators (LED Display)	CHARGE, POWER, five 7-segment LEDs (built-in digital operator function)									
Others	Reverse rotation connection, origin search, DC reactor connection terminal for harmonic suppressions, automatic motor discrimination function

Connection Diagrams

Single-phase 100/200 VAC (When using SGDS SERVOPACK)

- *1 : represents twisted-pair wires.
- *2 : The time constant for the primary filter is 30 μ s.
- *3 : Connect when using an absolute encoder.
- *4 : This circuit is electrically separated from the outside to prevent electric shock.
- *5 : This is a SELV circuit separated from other circuits by double or reinforced insulation.
- *6 : Customers must purchase a 24-VDC power supply with double insulation.
- *7 : Add an L3 terminal for three-phase power supply.

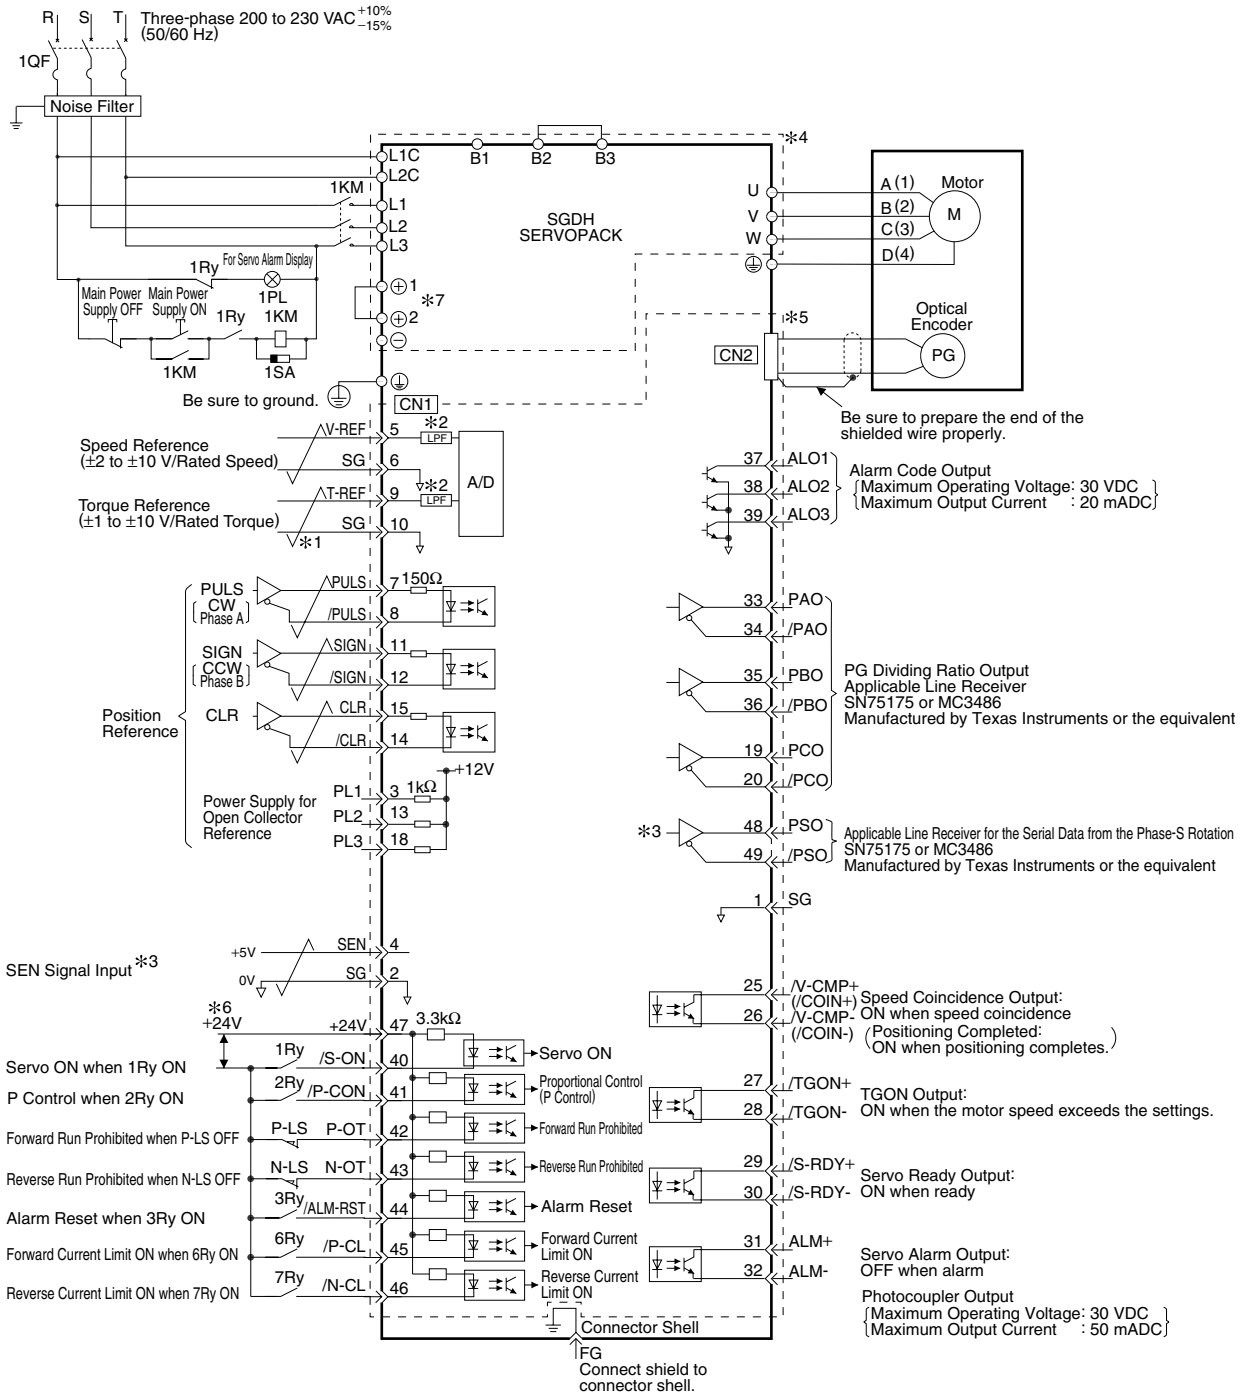

● Single-phase 200 VAC (When using SGDH SERVOPACK)

- *1 : represents twisted-pair wires.
- *2 : The time constant for the primary filter is 47 μ s.
- *3 : A regenerative resistor can be connected between terminals B1 and B2.
- *4 : Connect when using an absolute encoder.
- *5 : This circuit is electrically separated from the outside to prevent electric shock.
- *6 : This is a SELV circuit separated from other circuits by double or reinforced insulation.
- *7 : Customers must purchase a 24-VDC power supply with double insulation.
- *8 : Place a DC reactor between terminals $\oplus 1$ and $\oplus 2$ to suppress high harmonic waves.
